## ChetanHickok Cole Architects Brings NYU to D.C.

April 7, 2009

Hickok Cole Architects was chosen to design the new Washington D.C. 75,000-sq.-ft. build-to-suit New York University branch, a mixed-use facility targeting LEED Gold certification. Major cities such as Paris, Florence and Shanghai host NYU semester programs, and the university has chosen D.C. as the location for its new Arts/Sciences program. The project will house five floors of dormitories, featuring four-person suites, provided with shading and privacy through an external screening system.

The dorms are visually separated from the academic areas below by a balcony that runs along the building façade, outside the reading room. An interconnecting staircase runs from the first floor student lounge to the academic areas.

The project will also house spaces for academic programs, support staff, and lobbyists.

### On The Boards: **New York University**

**Washington, DC** 75,000 sf Build-to-Suit

- Washington, DC joins the list of cities, including Paris, Florence and Shanghai, which will host New York University (NYU) semester programs. NYU has chosen DC as the location for its Arts/Sciences program, to be housed in a new build-to-suit facility at 1307 L Street, NW.
- Hickok Cole Architects enjoys being in the same league as other architects such as Polshek Partnership Architects, FXFowle and Steven Holl Architects who have completed recent projects at the New York campus. The DC branch, by Hickok Cole, will be a mixed-use facility targeting LEED® Gold certification with space for academic programs, support staff, lobbyists and student dormitories.
- 5 floors of dormitories feature 4-person suites, provided with shading and privacy through an external screening system. The Hickok Cole design team strove to create equitable living spaces despite the challenges of this narrow, 60' wide site.
- A balcony runs along the building façade outside the reading room, visually separating the dormitories from the academic areas below. The balcony, along with an interconnecting staircase running from the first floor student lounge to academic areas, helps characterize the building as an institutional space thriving with public activity.

### Completed: **Council for Responsible Nutrition - LEED CI Certified**

**Washington, DC** 6,300 sf Association Headquarters Interiors

- The Council for Responsible Nutrition (CRN), the nation's leading trade association representing the dietary supplement industry, has been awarded LEED Commercial Interiors certification by the U.S. Green Building Council.
- The full scale renovation of CRN's 6,300 sf Washington, DC headquarters will be added to the over 8 million sf of LEED projects completed, in design or under construction by Hickok Cole.
- A space like CRN offered young Interior Designer, Dana Mathews, LEED AP, the opportunity to contribute to the movement towards sustainability as a staple in design practice. At \$66/sf, the space also shows how sustainable design can be accessible to greater numbers of people with LEED certification.
- Work is no longer relegated to the individual workspace. Public areas double as teaming areas. The library is a touch-down area for impromptu meetings. Equipped with power and data, the informal, café-like pantry enables employees to work together. A small meeting area on the window line allows daylight into the interior providing employees with an additional space to collaborate in a more public setting.
