

# Purpose: Information, Connection and Partnership

## Information, Connection and Partnership

The World Water Center is a non-partisan, independent charitable corporation organized and existing under the laws of the Commonwealth of Virginia in the United States. The fundamental purpose of the World Water Center is to function as a clearinghouse for information related to water projects and activities on a worldwide basis. The Center will operate a web site that will be available internationally, free to all, with multi-lingual capabilities. The organization is dedicated to

promoting partnerships between many types of organizations who wish to work together on water projects and informing the public about these activities. It provides a single place where one can find a calendar of all water related conferences and events worldwide. It will provide a newsletter that will highlight water projects and partnerships and cover major world water conferences. The World Water Center exists as a global place dedicated to the possibility of people being united to bring about clean and safe water for all.

Clean Water is an Inalienable Right of the World.

# H<sub>2</sub> World Water Center

What if everyone joined together on world water projects?

If everyone worked together, what could be accomplished?

## How the world can work together

In order to stay current with world water events and organizations working in the water realm, the World Water Center will attend most major global water conferences with the combined purpose of reviewing the conference, providing a review for the general public, members, and promoting the World Water Center's benefits.

The World Water Center will have close ties with the international volunteer groups of Rotary's Rotaracts, who will become the on-the-ground gatherers and supporters of clean water projects around the world.

The multi-lingual database includes categories like community service organizations, governmental organizations, commercial/industrial suppliers, non-profits and associations, religious organizations, scientific and academic institutions, and foundations funding world water projects.

The idea is to promote communication and partnering opportunities between these groups. The World Water Center will provide access to information about water projects and partnering opportunities within the different disciplines and it will foster new conversations and new partnerships.

The World Water Center web site-accessed database will cross-reference and tag specific projects will provide a multi-dimensional source of information. The search engine will be able to locate specific types of projects in a particular city or country, it will be able to locate organization funding projects, and it will be able to locate existing projects and partnerships. It will also collect in-depth information about these projects and partnerships.

First level access to the database will be free to all, membership level will provide a newsletter and a further search capability, and in the future, subscribers will enjoy deep search/research information.

The World Water Center hopes that the sheer mass of people having conversations in an open and free manner under the umbrella of a non-partisan charitable organization will foster great opportunities for the world to gain clean water.

The World Water Center will provide a platform for its constituency's policy makers to discuss, evaluate, and provide educational opportunities within the realm of partnering.

Looking far out into the future, the World Water Center intends to build a library and resource center for further partnering, research, and archival purposes.
